

Washington Flora Checklist

A checklist of the Vascular Plants of Washington State

Hosted by the University of Washington Herbarium

Family: Taxaceae

2 terminal taxa (species, subspecies, and varieties).

The Washington Flora Checklist aims to be a complete list of the native and naturalized vascular plants of Washington State, with current classifications, nomenclature and synonymy.

Taxa included in the checklist:

- * Native taxa whether extant, extirpated, or extinct.
- * Exotic taxa that are naturalized, escaped from cultivation, or persisting wild.
- * Waifs (e.g., ballast plants, escaped crop plants) and other scarcely collected exotics.
- * Interspecific hybrids that are frequent or self-maintaining.
- * Some unnamed taxa in the process of being described.

Family classifications follow [APG IV](#) for angiosperms, PPG I (J. Syst. Evol. 54:563?603. 2016.) for pteridophytes, and Christenhusz et al. (Phytotaxa 19:55?70. 2011.) for gymnosperms, with a few exceptions. Nomenclature and synonymy at the rank of genus and below follows the [2nd Edition of the Flora of the Pacific Northwest](#) except where superseded by new information.

Accepted names are indicated with blue font; synonyms with black font.
Native species and infraspecies are marked with **boldface** font.

Please note: This is a working checklist, continuously updated. Use it at your discretion.

Created from the Washington Flora Checklist Database on May 5th, 2024 at 5:13pm PST.

Gymnosperms:

Taxaceae [FNA2, HC, HC2] Yew Family

Synonyms: (none)

References: (none)

Taxus [FNA2, HC, HC2]

Sp. Pl. 2: 1040. 1753; Gen. Pl. ed. 5, 462, 1754.
yew

Taxus baccata L. [HC2, Stace 1997]

Sp. Pl. 2: 1040.
English yew

Recently collected in several places in King Co. as a garden escape.

Taxus brevifolia Nutt. [FNA2, HC, HC2]

N. Amer. Sylv. 3: 86, plate 108.
Pacific yew, western yew

Taxus baccata L. ssp. *brevifolia* (Nutt.) Pilger
Taxus baccata L. var. *brevifolia* (Nutt.) Koehne
Taxus baccata L. var. *canadensis* Benth.
Taxus bourcierii Carrière
Taxus lindleyana A. Murray bis

FNA2: "The name *Taxus baccata* Hooker has been misapplied to this species. The leaves of *Taxus brevifolia* are usually somewhat falcate. The wood of *Taxus brevifolia* is hard and durable, yet easily worked, making it popular for construction of novelty items by local woodworkers. Because of this, large trees are unscrupulously poached; in some areas the species has been nearly extirpated. The bark of the tree is a promising natural source of taxol, a drug for treating various cancers; exploitation of the species for medicinal purposes is further threatening it."
